SECOND-YEAR MATHEMATICS FOR SECONDARY SCHOOLS**DOWNLOAD**

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 Excerpt: . . . equation. This is the general method of solving a system of equations in two unknowns, of which one is linear and the other quadratic. Many problems lead to quadratic equations in two unknowns. The following problem will illustrate further the method of solution to be used in solving a system of equations in two unknowns, when one equation is of the first degree and the other of the second. ILLUSTRATIVE PROBLEM In the right triangle ABC, Fig. 172, with sides 3 and 4, to construct a line through C so that the perimeters of the two new triangles formed may be equal. Analysis: Consider the problem solved and let CD be the required line A through C. The position of D evidently is determined by determining AD. The values $x=2$, $y=3$ satisfy equations (1) and (2) but do not satisfy the conditions of the problem. Therefore this solution is disregarded and 3 and 2 are the required values of x and y , respectively. From the preceding solution it is seen that a system of equations in two unknowns, when one of the equations is of the first and the other of the second degree, may be solved as follows: Solve the linear equation for one of the unknowns, x or y , and substitute that value in the second-degree equation. This will lead to a second-degree equation in the other unknown, y or x , as (3), which is then to be solved. The values of y or...
